

PRESCIENT ABSOLUTE BALANCED FUND

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to return CPI + 5% per annum over a full market cycle with less capital risk than the average balanced fund.

INVESTMENT PROCESS

The Fund invests in a diversified portfolio including cash, capital markets, equities and property, with active asset allocation. Derivatives can be utilised to reduce downside risk when pricing warrants this. The equity selection is active. The Fund is well diversified globally and the offshore allocation and currency exposure is managed actively.

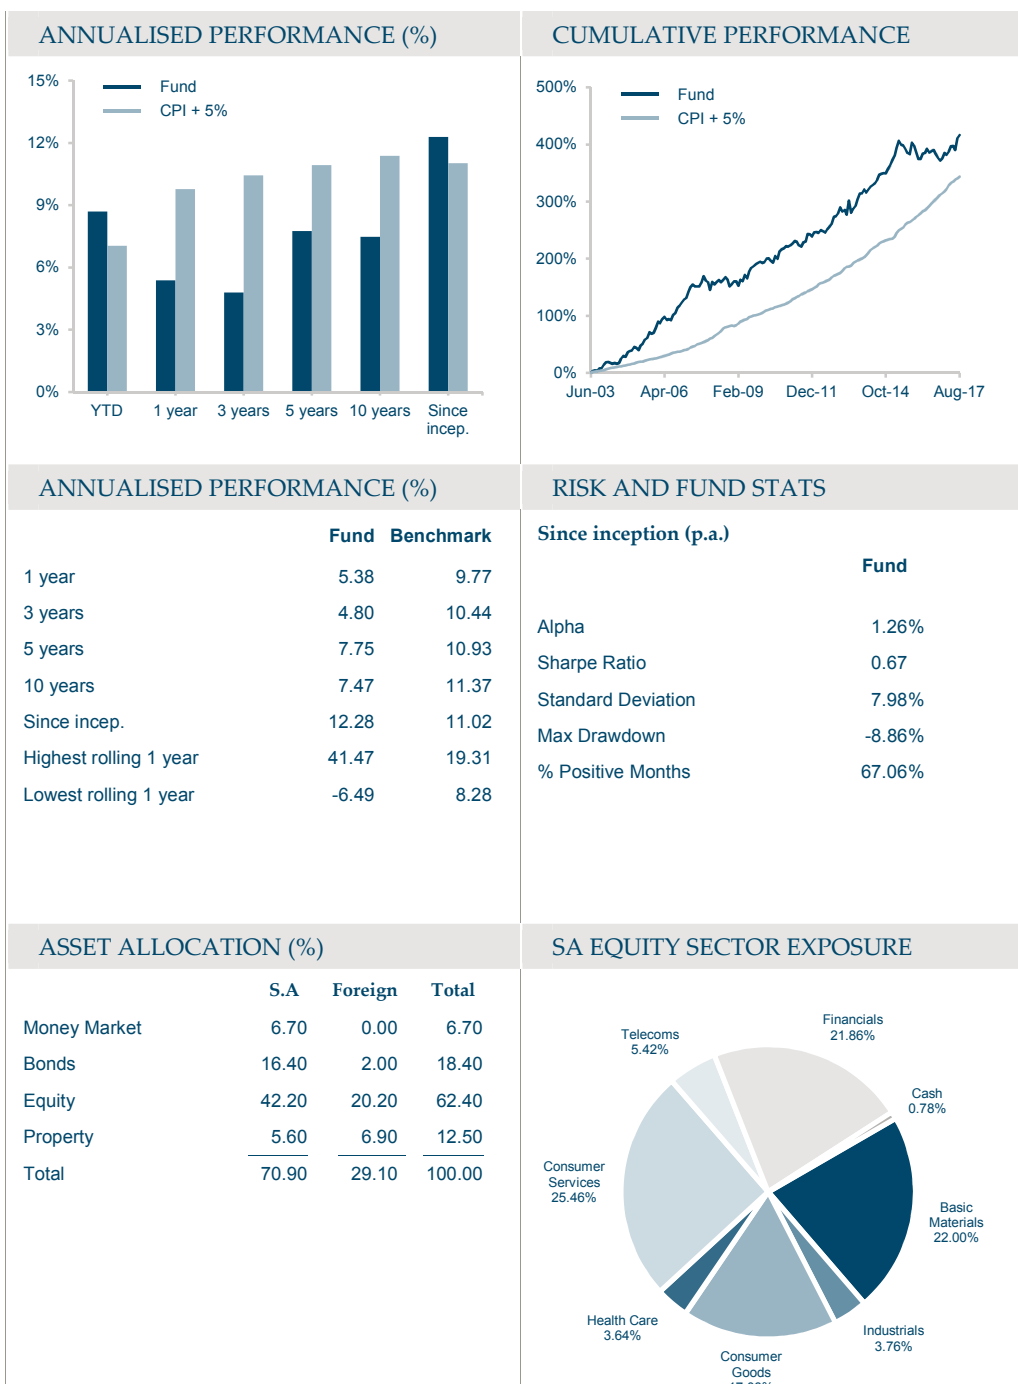

WHO SHOULD INVEST

Investors seeking significant real returns over the long term but who are risk conscious over the shorter term. The Fund is suitable for investors with a medium to long-term investment horizon and is Regulation 28 compliant.

RISK INDICATOR DEFINITION

These portfolios typically have moderate equity exposure and exposure to offshore markets which may result in capital volatility over the shorter term. They are managed in such a manner that the probability of double digit capital losses over one year periods is unlikely. These portfolios typically target returns in the region of 4% - 5% above inflation over the long term.

FUND COMMENTARY

There appears to be a widening gap between macroeconomic stability and geopolitical uncertainty. August was no exception. GDP growth in the US was revised higher to 3% SAAR for Q2, the Eurozone GDP for Q2 was confirmed at 2.5% and Japan continued its recent acceleration to now reach 2% in Q2. But this broad global macroeconomic stability stands in stark contrast to the rising tensions between the United States and North Korea. A series of escalating steps ensued in August, starting with missile tests in July, followed by verbal fights including threats of "Fire and Fury" in mid-August, and then North Korea's first test detonation of a thermonuclear bomb in early September. The latest nuclear explosion was 5 times greater than previous tests and triggered a 6.3 magnitude earthquake. However, no meaningful tremors reached the global financial markets. In August, the Top 40 index returned 2.6% and the ALBI delivered 1.6%. Globally, the S&P 500 and European stock indexes were largely flat when measured in USD: the S&P 500 delivered 0.05%, the DAX and the CAC40 indices returned 0.07% and 0.43% respectively and the FTSE100 fell 1.5%. China was a winner again with a return of 4.25% in USD while Africa ex SA fell -0.7%.

Contributors to performance:

Local equities had another great month including our holdings in resources and property.

Detractors from performance:

Most of our offshore assets were flat in USD terms but detracted from Fund performance due to the moderately stronger rand.

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Money Market Funds are priced at 1pm, all other Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

PRESCIENT ABSOLUTE BALANCED FUND

GLOSSARY

Annualised performance: Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest performance: The highest and lowest performance for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Current Yield: Annual income (interest or dividends) divided by the current price of the security.

Alpha: Denoted the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.
