

# PRESCIENT YIELD QUANTPLUS<sup>®</sup> FUND

## MINIMUM DISCLOSURE DOCUMENT

### INVESTMENT AND RETURN OBJECTIVE

The Fund aims to achieve returns above the STeFI Call Index and the average money market fund, while minimising the risk of any underperformance. Importantly, the Fund is managed conservatively and it aims to maintain capital stability and liquidity.

### INVESTMENT PROCESS

The Fund invests in cash, money market and high-quality capital market (nominal or real) instruments including structured notes. Fund performance can be generated from taking interest rate or duration views, yield enhancement via credit instruments and also via the use of derivatives. The average duration of the portfolio will not exceed 9 months (or 270 days) and the maximum single instrument maturity is limited to 36 months.

### WHO SHOULD INVEST

Investors seeking a liquid, low risk money market offering, with enhanced yields. This Fund is suitable to investors with a short-term investment horizon and is Regulation 28 compliant.

### RISK INDICATOR DEFINITION

These portfolios typically have no or low equity exposure, resulting in higher interest yields and stable capital values with the probability of capital losses over the shorter term (3 months) highly unlikely. These portfolios typically target returns in the region of 1% – 3% above inflation before tax over the long term.

### RISK INDICATOR

### FUND COMMENTARY

The 3-month Jibar declined 0.25% in July post the repo rate cut from 7.33% to 7.08% while the 12 month Jibar declined 0.42% from 8.17% to 7.75% over the same period. The forward interest rate curve shifted around 0.25% - 0.35% lower over the month and is currently pricing in almost 0.50% worth of rate cuts in 12 months' time. However, risks to interest rates coming lower stem from the political risks in December, tightening of global monetary policy and a narrowing of rate differentials of SA relative to EM peers.

Fund duration remains short (less than three months) as we do not see value in holding fixed rate assets at levels that have already priced in two additional interest rate cuts. At the end of July, holdings consisted of a mix of yield enhancing assets comprised of bank floating-rate notes, step-up notes, NCD's, credit-linked notes, corporate paper, short-dated fixed and floating rate bonds. Additionally, the Fund is currently yielding 8.4% gross.

Furthermore, it outperformed its benchmark in July and the main contributors to performance emanated from the high funding spreads and the downward shift in the yield curve, which led to some mark to market gains.

## DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Money Market Funds are priced at 1pm, all other Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

## GLOSSARY

**Annualised performance:** Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

**Highest & Lowest performance:** The highest and lowest performance for any 1 year over the period since inception have been shown.

**NAV:** The net asset value represents the assets of a Fund less its liabilities.

**Current Yield:** Annual income (interest or dividends) divided by the current price of the security.

**Alpha:** Denoted the outperformance of the fund over the benchmark.

**Sharpe Ratio:** The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

**Standard Deviation:** The deviation of the return stream relative to its own average.

**% Positive Month:** The percentage of months since inception where the Fund has delivered positive return.

**Average Duration:** The weighted average duration of all the underlying interest bearing instruments in the Fund.
