

PRESCIENT AFRICA EQUITY FEEDER FUND

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund invests in listed equity markets across Africa, excluding South Africa. It aims to achieve returns above the Nedbank All Africa Top 100 ex South Africa Index by investing in shares that are showing value relative to their trading price.

INVESTMENT PROCESS

The Investment process follows an unbiased, quantitative bottom-up approach which invests in shares with various characteristics that have proven to pay rewards over time. The Fund will favour companies that represent good investment value, superior quality, positive market sentiment and exhibit lower volatility. Political and economic risks are also considered. Blending shares with different characteristics into the Fund helps to deliver a better diversified portfolio which results in improved stability in returns over time. Although the Fund aims to maximise returns over the long-term it is also structured to minimise the risk of underperforming the benchmark. The feeder fund is invested wholly in the Prescient Africa Equity Fund.

WHO SHOULD INVEST

Investors with a long-term investment horizon who are seeking capital growth in US Dollars and have an appetite for African equity market volatility.

RISK INDICATOR DEFINITION

These portfolios typically hold meaningful equity and offshore exposure which may result in significant capital

FUND COMMENTARY

Global indices were full steam ahead in January. In the US, despite a government shutdown occurring intramonth, Trump's tax overhaul plan gathered momentum and sent the Dow Jones Industrial Average to new all-time high levels (+5.79% over the month). Across the Atlantic Ocean, the European Central Bank (ECB) kept interest rates on hold as expected and hinted that their asset buying program could end as early as September this year. European equity markets were not overshadowed by their American counterparts evidenced by the DAX and the CAC40 indices ending 2.10% and 3.19% in the green. In the east, interest rates were also kept on hold in Japan, where the Nikkei rose by 1.46% in January. The CSI300 index in China continued on its merry way to end the month 6.08% up.

Similar performances were witnessed in Africa, where the African Development Bank during the month released its average economic growth forecast for the continent at 4.1% for 2018, up from the 3.6% estimated for 2017. The MSCI Africa ex SA and the Nedbank Africa 100 ex SA posted respectable returns for the month, up 5.28% and 6.66% respectively. The best performing markets were Nigeria and Kenya. The Nigerian economy, now firmly on the road to recovery having recently come out of recession, continued to display improvements in business conditions. The January PMI print firmly in expansionary territory at 57.3pts was evidence of this. Oil prices above USD70/bbl with stable production to a large extent, aided business conditions in Nigeria, despite renewed threats to oil infrastructure from Niger Delta militants. FX reserves have thus been allowed to accumulate to over \$40.8bn from lows of \$23bn in late 2016. The MSCI Nigeria index was up an impressive 13.42% for the month. In the meanwhile, political tensions in Kenya remained elevated. On the other hand, business conditions remained firmly in expansive territory, with the January PMI returning 59.2pts and inflation surprisingly edging higher to 4.8%. Nevertheless, major uncertainty still remains around the 14% interest rate cap, which as reiterated by the Central Bank governor, has complicated monetary policy direction. Earlier during the month, the Monetary Policy Committee left the Policy Rate unchanged at 10% despite an inflation outlook favourable to easier monetary policy. The MSCI Kenya Index returned 8.55% in January.

The Prescient Africa Equity Feeder Fund returned 6.01% in USD (gross of fees)

Top contributors:

The counters that contributed the most to performance were Eastern Tobacco (+17.56%), Egyptian International Pharmaceuticals (+25.77%) and Elswedy Electric Co (+8.35%).

Top detractors:

The shares that detracted the most to Fund performance were Dangote Cement (-7.76%), Kenolkobil Group (-6.78%) and Douha Prom Addoha (-11.86%).

DISCLAIMER

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. During the phase in period TERs do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction cost is a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

A Feeder Fund is a portfolio that invests in a single portfolio of a collective investment scheme which levies its own charges and which could result in a higher fee structure for the feeder fund.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut-off time, Prescient shall not be obliged to transact at the net asset value price as agreed to. Money Market Funds are priced at 1pm, all other Funds are priced at either 3pm or 5pm depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers, including actual initial and all ongoing fees, with income reinvested on the reinvestment date. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
